

D2C Marketing Funnel Analysis

Where 120,000 website sessions turn into 8,181 orders, and how to fix the leaks

Python | MySQL | Power BI

Rishi Sahani | Business Analyst

Project snapshot

Jul to Dec 2025 | 4 channels | 3 campaign types | Metro and Non-Metro | Mobile and Desktop

120K

Sessions analysed

₹17.02M

Net revenue

6.82%

Conversion rate

₹2,080

Average order value

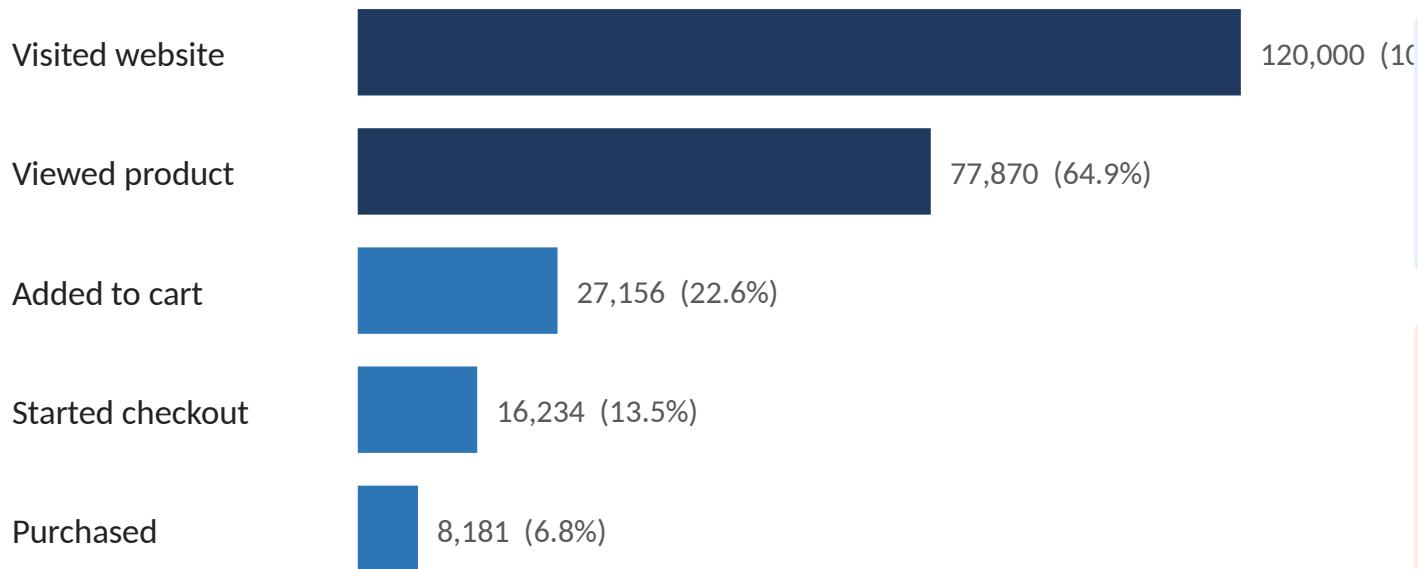

Python: validated data (0 nulls, sequential funnel, revenue = order value less 10% discount), loaded to MySQL

MySQL: funnel, channel, campaign, discount and segment queries

Power BI: one-page dashboard with Region, Campaign, Month and Device slicers

Only 6.8% of sessions end in a purchase

Two stages hold the biggest leaks

65%

of product viewers
never add to cart

49.6%

of checkouts are
abandoned

Conversion is uniform; revenue follows traffic

Email is the one real outlier (7.31%, $p \approx 0.02$)

Channel	Share of sessions	Conversion	Revenue / session	Revenue
Paid Ads	44.9%	6.72%	₹139.8	₹7.54M
Organic	30.0%	6.81%	₹141.6	₹5.09M
Social	15.1%	6.81%	₹142.7	₹2.58M
Email	10.1%	7.31%	₹149.8	₹1.81M

- Every segment converts at 6.6% to 7.3%: device, region, user type, campaign and month.
- Traffic is flat at about 665 sessions and ₹94.5K revenue per day. Growth needs more traffic and a better funnel.

The 10% discount costs ₹0.98M and does not lift basket size

Discount is recorded only on completed orders

54.5%

of orders used the discount

₹0.98M

given away (5.5% of gross value)

₹2,199 vs ₹2,201

gross AOV with vs without discount

- Discount campaigns convert at 6.83%, the same as Influencer (6.83%) and New Launch (6.79%).
- Usage is 54% to 56% in every campaign type, so it works as a blanket price cut.
- A holdout test is needed to show whether it brings in extra buyers.

Recommendations

- 1 Fix product to cart:** Improve product pages and A/B test. +5 pts here is about +14% orders (~₹2.4M over 6 months).
- 2 Recover abandoned checkouts:** 8,053 abandoned. Reminders and guest checkout; 10% recovered is about ₹1.7M.
- 3 Target the discount:** Offer it to cart abandoners and first-time buyers; measure lift with a holdout.
- 4 Grow Email and lifecycle:** Best conversion (7.31%) and ₹149.8 per session, but only 10% of traffic.
- 5 Mobile-first fixes:** 70% of sessions and revenue come from mobile.

Key takeaway

Revenue is flat because the funnel leaks at cart and checkout, not because one segment underperforms.

Stack: Python, MySQL, Power BI
